# 1. GENERAL

# 1.1 INTRODUCTION

This Supplement to the Airplane Flight Manual DA 40 NG must be included in the AFM when the airplane is operated as a tow-plane.

The information contained in this Supplement to the DA 40 NG AFM supersedes and supplements the information in the DA 40 NG AFM only as far as included in this Supplement. For all operating limitations, procedures and performance specifications not included in this Supplement, the DA 40 NG AFM remains valid.

# **1.2 CERTIFICATION BASIS**

The towing operation with this airplane is certified in accordance with Special Condition CRI O-01 "Glider Towing".

The implementation of the design change advisory OÄM 40-312 is prerequisite for the use of the DA 40 NG as tow-plane.

# **1.5 DEFINITIONS AND ABBREVIATIONS**

#### (i) Miscellaneous

Sailplane In this Supplement, "sailplane" stands for the towed sailplane or the towed powered sailplane.

Doc. # 6.01.15-E	Rev. 0	08 Jul 2013	Page 9 - O1 - 5
			5

## **1.6 UNITS OF MEASUREMENT**

#### **1.6.3 CONVERSION CHART CAS / IAS**

The following table applies only to the DA 40 NG with flaps in T/O position.

Airspeeds are converted as follows:

[km/h] / 1.609 = [mph] [km/h] / 1.852 = [kts]

The conversion between CAS and IAS is done in accordance with the main part of the AFM, Section 5.3.1 AIRSPEED CALIBRATION.

CAS [km/h]	CAS [mph] CAS [kts]		IAS [kts]
90	56	49	44
95	59	51	46
100	62	54	49
105	65	57	52
110	68	59	54
115	71	62	58
120	75	65	62
125	78	67	65
130	81	70	68
135	84	73	72
140	87	76	75
145	90	78	78
150	93	81	81
160	99	86	86
170	106	92	93
180	112	97	100

Doc. # 6.01.15-E	Rev. 0	08 Jul 2013	Page 9 - O1 - 6
------------------	--------	-------------	-----------------

# 1.7 TWO-VIEW DRAWING

Doc. # 6.01.15-E
------------------

# 2. OPERATING LIMITATIONS

## 2.2 AIRSPEED

The operating limitations specified in the DA 40 NG AFM remain valid with the following deviations:

- \* The maximum permissible speed for tow-plane operation is  $v_A = 101$  KIAS. However, the design aerotow speed  $v_T$  of the towed sailplane must not be exceeded.
- \* The minimum permissible speeds for the tow formation are 62 KIAS at 960 kg / 2116 lb (flap position of tow-plane: T/O), but not less than 1.2 times the minimum airspeed of the towed sailplane.
- \* Only sailplanes with a design aerotow speed of  $v_T = 62$  KCAS (115 km/h) or more may be towed.

# 2.7 MASS (WEIGHT)

#### Aero-towing:

The mass of the towed sailplane must not exceed 560 kg (1235 lb).

The tow-plane take-off mass must not exceed 980 kg (2161 lb).

For valid combinations of the maximum mass of the tow-plane and the sailplane, see chapter 5.

## 2.12 FLIGHT CREW

Minimum flight crew:

Maximum number of occupants:

1 (one person)

2 (two persons)

# NOTE

Tow flights are work flights. All national requirements must be met. The maximum mass of the tow-plane for aerotowing according to Section 2.7 must not be exceeded.

# 2.13 KINDS OF OPERATION

Provided that national operational requirements are met and the minimum equipment according to the main part of the AFM is installed and operative, the following kinds of operation are approved:

- \* tow flights according to visual flight rules during daytime,
- \* tow flights according to visual flight rules during nighttime.

Doc. # 6.01.15-E	Rev. 0	08 Jul 2013	Page 9 - O1 - 9

Minimum Operational Equipment (Serviceable)

- towing assembly installation according to OÄM 40-312,
- 2 rear view mirrors according to OÄM 40-312,
- tow-rope with a length of 30 m to 60 m (98 ft to 197 ft), including a ring pair according to LN 65091,
- weak link with a maximum breaking load of 400 daN (899 lbf).

# 2.16 OTHER LIMITATIONS

#### 2.16.8 TOW-PLANE OPERATION

- Towing of sailplanes and powered sailplanes is approved as far as these are approved for aerotowing.
- Towing of more than one sailplane at a time is not permitted.
- The auto pilot must not be activated during aero-towing operation.
- Banner towing is not approved.

# NOTE

The sailplane must be approved for aero-tow.

Doc. # 6.01.15-E	Rev. 0	08 Jul 2013	Page 9 - O1 - 10
	1		

# 3. EMERGENCY PROCEDURES

Proceed according to the emergency procedures given in the main part of the Airplane Flight Manual.

In addition:

### 3.3 ENGINE PROBLEMS

#### **3.3.8 ENGINE PROBLEMS DURING TOW-PLANE OPERATION**

- In case of engine problems during the tow-flight, advise the sailplane pilot to release the tow-rope via signals or radio. If this is not possible or unsuccessful, the tow-rope must be released immediately.
- Proceed according to the emergency procedures given in the main part of the Aircraft Flight Manual.

### 3.5 SMOKE AND FIRE

#### 3.5.4 SMOKE AND FIRE DURING TOW-PLANE OPERATION

- In case of smoke or fire during the tow-flight, advise the sailplane pilot to release the tow-rope via signals or radio, or release the tow-rope.
- Proceed according to the emergency procedures given in the main part of the Airplane Flight Manual.

### 3.8 RECOVERY FROM AN UNINTENTIONAL SPIN

If during the tow-flight the airplane fails to react normally to elevator and aileron operation, immediately release the tow-rope and push the control stick forward. If this does not prevent spinning, proceed according to the emergency procedures given in the main part of the AFM.

Doc. # 6.01.15-E	Rev. 0	08 Jul 2013		Page 9 - O1 - 11
------------------	--------	-------------	--	------------------

# 3.9 OTHER EMERGENCIES

#### 3.9.4 ABNORMAL ATTITUDE OF THE TOWED SAILPLANE

- If maneuverability is no longer ensured due to an abnormal attitude of the towed sailplane, the tow-rope must be released immediately.
- If the sailplane is apparently outside of a 60° cone behind the tow-plane (i.e., if the angle between the tow-rope and the longitudinal axis of the tow-plane exceeds 30°), the tow-rope must be released immediately.

### WARNING

The most critical configuration is usually the one in which the sailplane climbs above the tow-plane during take-off and climb, especially when using a tow-rope connector located at the CG of the sailplane (if approved).

#### 3.9.5 FAILURE OF THE RELEASE MECHANISM ON THE SAILPLANE

Landing in tow configuration is possible with the air brakes of the sailplane extended at a constant position and the rate of descent being controlled via the performance setting of the tow-plane.

### WARNING

The airspeed must be kept constant during the extension of the flaps of the DA 40 NG.

Doo #6.01.15 E	Boy 0	09 101 2012	
DOC. # 0.01.15-E	Rev. U	00 Jul 2013	Fage 9 - 01 - 12

## 4A. NORMAL OPERATING PROCEDURES

Proceed according to the normal operating procedures given in the main part of the Airplane Flight Manual.

In addition:

### 4A.5 CHECKLISTS FOR NORMAL OPERATING PROCEDURES

#### 4A.5.1 PRE-FLIGHT INSPECTION

II. Walk-around Check, Visual Inspection

- 1. Check coupling and release mechanism for excessive dirt and improper function (perform release test).
- 2. Check tow-rope, ring pair and weak link for excessive wear, damage and incorrect configuration.
- 3. Check rear view mirrors for damage and insecure attachment.

### NOTE

The check of the weak link and the check for incorrect configuration is conducted according to Chapter 6.

#### 4A.5.7 TAKE-OFF

Take-Off Procedure as a Tow-Plane

- 1. Tighten tow-rope prior to take-off.
- 2. Lift off the tow-plane after the sailplane has lifted off.
- 3. Accelerate to minimum towing speed while still in close proximity to the ground.
- 4. Change to climb steadily.

#### 4A.5.8 CLIMB

The climb procedure given in the main part of the AFM shall be applied.

# CAUTION

During the acceleration phase, care must be taken to ensure that the sailplane lifts off first and that the minimum towing speed is reached while still in close proximity to the ground.

The best climb rates are achieved at the minimum permissible tow speeds. When towing a sailplane with a high stall speed and/or in rough air, higher towing speeds shall be used.

#### 4A.5.12 APPROACH & LANDING

Prior to landing the tow-rope should be dropped and the successful release should be verified in the rear view mirror. Dropping of the tow-rope must not endanger persons or objects on the ground.

Landing with the tow-rope attached is only possible when an approach along an obstacle-free path at increased airspeed is possible.

Dragging the tow-rope on the ground results in a shorter flare phase.

Doc. # 6.01.15-E	Rev. 0	08 Jul 2013	Page 9 - O1 - 14
			U U

## 4B. ABNORMAL OPERATING PROCEDURES

#### 4B.9 LANDING IN TOW CONFIGURATION

Approach and landing in tow configuration are possible with the air brakes of the sailplane extended at a constant position and the rate of descent being controlled via the power setting of the tow-plane.

Landings in tow configuration are permissible for training and instruction purposes.

### WARNING

The airspeed must be kept constant during the extension of the flaps of the DA 40 NG.

# 4B.10 UNINTENTIONAL SEPARATION OF THE TOW-ROPE

If the connection to the towed sailplane separates unintentionally or if the sailplane pilot performs an emergency release, the pilot of the tow-plane must continue his flight maintaining direction, airspeed and attitude. The sailplane must be observed in the rear view mirror, until it is certain that the sailplane will not be obstructed in its continuation of flight or landing and roll out.

I	Doc. # 6.01.15-E	Rev. 1	01 Jul 2014	Page 9 - O1 - 15
I	Doc. # 6.01.15-E	Rev. 1	01 Jul 2014	Page 9 - O1 -

#### 5. PERFORMANCE

### 5.3 PERFORMANCE TABLES AND DIAGRAMS

#### 5.3.6 WIND COMPONENTS

The maximum demonstrated crosswind component during towing is 5 kts.

#### 5.3.7 TAKE-OFF DISTANCE

The take-off data has been determined under the following conditions:

- Flap position: T/O
- Maximum take-off power
- Take-off mass of the DA 40 NG : see table
- Level runway, asphalt surface
- No crosswind component
- Steady headwind: see table
- Maximum Take-Off Mass (MTOM) of sailplane : see table
- Take-off speed : 57 KIAS
- Climb speed : 64 KIAS

### CAUTION

On dry, level grass runways with short grass a 20% longer take-off roll must be expected.

Doc. # 6.01.15-E	Rev. 0	08 Jul 2013		Page 9 - O1 - 16
------------------	--------	-------------	--	------------------

### CAUTION

A ground slope of 2 % (2 m per 100 m, or 2 ft per 100 ft) results in an increase in the take-off distance of approximately 17 %. The effect on the take-off roll can be greater.

### WARNING

The condition of the ground (grass height, soft ground, uneven terrain), a poorly maintained airplane, deviation from the prescribed procedures and unfavorable external factors (rain, cross-wind, wind shear) can all lead to a considerable increase in the take-off distance.

For a safe take-off the available runway length in front of the tow-plane must be at least equal to the take-off distance over a 15 m (50 ft) obstacle.

The take-off distances for the tow formation for sailplanes with different minimum wing spans and maximum masses should be taken from the table on the following page.

- s<sub>1</sub>: Take-off roll
- s<sub>2</sub>: Take-off distance over a 15 m (50 ft) obstacle

Increase	$\mathbf{s}_1$ and $\mathbf{s}_2$ b	y 15 % fo	r every cc	/ 10°C	; (18° n	F) inc	rease	in OA	AT ab	ove IS	SA

Use the table as follows:

1. Determine the pressure altitude. This defines the table column.

In case of intermediate values between two pressure altitudes, apply linear variation between two neighboring columns, or use the higher value.

Doc. # 6.01.15-E	Rev. 0	08 Jul 2013	Page 9 - O1 - 19
------------------	--------	-------------	------------------

- 2. Define the table row by the wing span of the sailplane.
- 3. Read take-off distance according to headwind component, apply linear variation if necessary.
- 4. Apply correction factor if OAT is higher than ISA condition. Use graph in Chapter 5.3.4 in the main part of the AFM for determination of ISA condition.
- 5. Influence of the sailplane mass:

If the mass of the sailplane exceeds the given values, the take-off distances must be increased by the same percentage as the mass (e.g.: a 10 % higher sailplane mass results in a 10 % longer take-off distance).

6. Influence of the DA 40 NG take-off mass:

If the mass of the DA 40 NG exceeds the given values, the take-off distances must be increased by three times the mass surplus (e.g.: a 10 % higher mass of the DA 40 NG results in a 30 % longer take-off distance).

#### Example:

DA 40 NG: 980 kg (2161 lb) take-off mass

Sailplane: 330 kg (728 lb), 16 m (52.5 ft) wing span

Airfield elevation 762 m (2500 ft) MSL, 20 °C (68 °F), no wind

1. Linear variation between the columns for 0 ft and 3000 ft is done with the following factor:

f = (2500 ft) / (3000 ft - 0 ft) = 0.83

2. The sailplane wing span exceeds 15 m (49 ft) but is less than 18 m (59 ft), use first row (min. 15 m / 49 ft).

Doc. # 6.01.15-E Rev. 0 08 Jul 2013 Page 9 - O1 - 2	Doc. # 6.01.15-E	6.01.15-E Rev. 0	08 Jul 2013	Page 9 - O1 - 20
---	------------------	------------------	-------------	------------------

- 3. Headwind component 0 kts, linear variation between the take-off distance values 510 m (1673 ft) and 601 m (1972 ft) with the computed factor f yields:
  - $s_2 = 510 \text{ m} + 0.83 \times (601 \text{ m} 510 \text{ m}) = 1673 \text{ ft} + 0.83 \times (1972 \text{ ft} 1673 \text{ ft}) = 586 \text{ m}$ = 1921 ft
- 4. Using the graph in the main part of the AFM, Section 5.3.4, a condition of ISA +10 °C is found. The take-off distance is increased by 15% to 674 m (2209 ft)
- 5. Mass correction for the sailplane: The sailplane is 10 % heavier than 300 kg (661 lb). The take-off distance increases by 10 % to 741 m (2430 ft).

The take-off distance over a 50 ft (15 m) obstacle is 741 m (2430 ft).

#### 5.3.8 CLIMB PERFORMANCE - TAKE-OFF CLIMB

The climb performance has been determined under the following conditions:

- Flap position : T/O -
- Maximum continuous power -- Take - off mass of DA 40 NG : see table
- Maximum take off mass (MTOM) of sailplane : see table
- : 64 KIAS
- Climb speed -

The maximum rates of climb are shown in the following table:

Pressure Altitude			0 ft	3000 ft	6000 ft	9000 ft
DA 40 NG Mass [kg] <i>[lb]</i>	Sailplane Wing Span [kg] <i>[lb]</i>	Sailplane Mass [kg] <i>[lb]</i>	Climb Rate [fpm] <i>[m/s]</i>	Climb Rate [fpm] <i>[m/s]</i>	Climb Rate [fpm] <i>[m/s]</i>	Climb Rate [fpm] <i>[m/</i> s]
980 2161	Single seat min. 15 <i>min. 49.2</i>	up to 300 up to 661	521 2.65	517 2.63	500 2.54	478 2.43

Doc. # 6.01.15-E	Rev. 0	08 Jul 2013	Page 9 - O1 - 23

### 6. MASS AND BALANCE

### 6.1 INTRODUCTION

All specifications given in the DA 40 NG AFM remain valid with the restrictions according to 2.7, 2.12 and 2.13 of this Supplement.

### 6.5 EQUIPMENT LIST

Additional equipment for aero-towing:

- \* 1 Tost release E 85
- \* 1 towing assembly mount, Dwg. No. DA4-2551-00-00
- \* 1 release mechanism, Dwg. No. DA4-2551-00-00
- \* 2 rear view mirrors, Dwg. No. DA4-2553-00-00
- \* 1 tow rope: length between 30 m (98 ft) and 55 m (180 ft), textile rope with a minimum breaking load of 1000 daN (2248 lbf).
- \* 1 pair of connection rings according to LN 65091 on the tow-plane end of the rope.
- \* at least 1 weak link, maximum breaking load 400 daN (899 lbf).

#### Optionally:

- \* 1 weak link on the sailplane end of the rope: breaking load according to the specifications of the sailplane manufacturer.
- \* 1 connection ring on the sailplane end of the rope according to the specifications of the sailplane manufacturer.

Doc. # 6.01.15-E	Rev. 0	08 Jul 2013	Page 9 - O1 - 24

Supplement O1 Tow-Plane Operation

# CAUTION

A weak link with less than 400 daN (899 lbf) must be used if required by the sailplane manufacturer.

# CAUTION

The pilot must ensure that the correct weak link is installed in the tow-rope, as the structure may otherwise become overstressed.

# NOTE

Even though rear view mirrors, tow-rope, connection ring pair and weak links are necessary for aero-towing, they are not considered for the determination of the CG.

Doc. # 6.01.15-E	Rev. 0	08 Jul 2013	Page 9 - O1 - 25

# 7. DESCRIPTION OF THE AIRPLANE AND ITS SYSTEMS

# 7.13 TOW EQUIPMENT

The release mechanism is installed to the fuselage tube using a towing assembly mount which was designed especially for the DA 40 NG. The tow-rope is released via a Bowden cable with a yellow/red release lever in the cockpit.

For aero-towing operation two additional rear view mirrors must be attached on the LH and RH stub wing (refer to two-view drawing, Section 1.7).

#### 7.13.1 PLACARDS / MARKINGS

The following additional placards are installed in the DA 40 NG if used as a tow-plane.

Placard	Place
Tow-rope Release	on the release lever
Ultimate load of weak link: max. 400 daN (899 lbf)	on the towing assembly mount

Doc. # 6.01.15-E	Rev. 0	08 Jul 2013	Page 9 - O1 - 26
------------------	--------	-------------	------------------

# 8. AIRPLANE HANDLING, CARE AND MAINTENANCE

### 8.2 AIRPLANE INSPECTION INTERVALS

#### 8.2.1 TOWING EQUIPMENT INSPECTION INTERVALS

Refer to the Airplane Maintenance Manual, Doc. No. 6.02.15, latest effective issue.

Doc. # 6.01.15-E	Rev. 0	08 Jul 2013	Page 9 - O1 - 27
