# SECTION 1

## GENERAL

### 1.1 INTRODUCTION

Pages 9-11-0 through 9-11-9 constitute Supplement No. 11 to the Airplane Flight Manual for the powered sailplane HK 36 TTS.

This Supplement provides additional performance data as required by national authorities.

## SECTION 5

# PERFORMANCE

### 5.3 ADDITIONAL INFORMATION

#### 5.2.8 LANDING PERFORMANCE

#### **WARNING**

The given data does not include any safety reserves. For a safe landing, the available length of the runway must at least be equal to the landing distance over a 15 m (50 ft.) obstacle ( $l_2$ ).

Under unfavorable conditions such as rain, tailwind, wind shear, sloped field, wet grass, a bad maintenance condition of the airplane or deviation from the given procedures, the landing distance can become considerably extended. Under very unfavorable conditions, a safe landing can become impossible.

The given data were determined under the following conditions:

- Maximum take-off mass (weight)
- Power: ..... Idle
- Propeller setting ..... TAKE-OFF
- Approach speed ..... 105 km/h (57 kts. / 65 mph)
- Level, paved runway
- Brake flaps ..... extended

The landing performance at MSL under ISA conditions is:

195m (640 ft.) landing roll and

395m (1296 ft.) landing distance over a 15 m (50 ft.) obstacle.

3.01.15-E	10 Nov 1999				9 - 11 - 6

The landing distances are contained in the following tables:

$l_1$  = Landing roll

$l_2$  = Landing distance over a 15 m (50 ft.) obstacle
